

# COVID-19 SCREENING

Manual screening processes are time consuming, inefficient, and lack data reporting capabilities for contact tracing. New systems are needed to ensure a safe environment for staff, visitors, and contractors entering facilities and sites.

19Screen offers a configurable online questionnaire to allow quick, cost effective Covid-19 screening, data reporting and contact tracing.

## CURRENT PROBLEM

Manual screening is costly due to volume of staff, visitors, and contractors and use of skilled workers to administer screening tests. For a single site each site, manual screening can cost up to \$12,000 per month (\$25/hr for 16 hours a day)

Lack of a centralized database makes it difficult to collect and store completed tests which are crucial in contact tracing in the event of an outbreak

## 19SCREEN SOLUTION

19Screen's configurable web-based questionnaire is sent to staff and visitors by text prior to entry. Screening results are emailed to your administrative staff in advance reducing the time and resources required to administer screens and assist with staff and visitor management. Recorded screens allow for data transparency in the event where contact tracing may be required.

Allow your staff to get back to doing the work they need to do and improve your Covid-19 screening process with 19Screen.
