

**Dr. Reed Beall**

Dr. Reed F. Beall is a population health researcher who works largely with medicine patent, regulatory, and utilization data to investigate the long-term impacts of national and international policy decisions which aim to balance incentives between equitable drug innovation and equitable drug access. He is an Associate Professor in Healthcare Policy in the Department of Community Health Sciences within the Cumming School of Medicine. He is a member of the O'Brien Institute for Public Health at the University of Calgary. He also serves as [affiliate faculty](#) with the Program on Regulation, Therapeutics, and the Law (PORTAL) based within the Division of Pharmacoepidemiology and Pharmacoeconomics at the Brigham and Women's Hospital and Harvard Medical School. He has been invited to provide testimony on his research to the trilateral technical symposium of the World Health Organization, the World Intellectual Property Organization, and the World Trade Organization, as well as to the United Nations Secretary-General's High-Level Panel on Access to Medicines. Dr. Beall's work has been published in Nature Biotechnology, JAMA, CMAJ, and Health Affairs, among others.
